

Helmet Headset Installation Guidelines

General Guide for MotoChello Headset Installation

MotoChello uses 40mm speakers with foam covers and industrial strength Velcro® for placement. The loop side adheres Speakers to the inside of your helmets outer shell. You may adjust them as needed to fine tune their placement. For best results and comfort, the headset

speakers should be placed towards the lower front of the ear (in front of the ear canal) and not against the top or back of the earlobe. Pressure in these areas can become uncomfortable over time. Having the speakers properly placed will also reduce wind, a bonus.

WARNING:

Do not cut, drill or modify your helmet in any way for safety reasons. Doing so may also void your helmets warranty and reduce its effectiveness.

Yellow/White wires - **RIGHT** ear

Black/Blue wires - **LEFT** ear

Green/Red wires - **Microphone**

Connects to appropriate wires listed at left

Adhesive backed for easy helmet install

The flat sides match up on the headset connectors so you can find them by feel. Avoid forcing them together to prevent possible bending of the pins.

Use needle nose pliers to separate connectors. They create secure connections but wires may be damaged by pulling on them.

Speakers fit inside the foam lining. Adjust placement to find your most comfortable spot

“Hook” side of Velcro is pre-installed on the back of microphones. Place “Loop” side at Mic location to adhere to helmet.

**Boom Mic extension arm should not lay on outside of helmet to avoid picking up external noise vibrations.

A. Point the white dot on the microphone to face you

B. If there is a flat side on the mic point it AWAY from you
