

# Instructions for verifying handlebar mount

For use with the MotoChello MC-100 System

The MotoChello MC-100 system is supplied with the upper mounts needed to attach the display unit to your cycle's handlebars. A lower handlebar mount and a lower reservoir mount are included that will fit most cycles, including the Honda Goldwing, Kawasaki Concours and most BMW's. Use these instructions to verify if the above mounts will fit your cycle, or if you will need to obtain a bike specific lower mount. The mounts are readily available from Ram Mounts (and most dealers). <http://www.rammount.com/Products/MotorcycleMounts/tabid/128/Default.aspx#wizard>

**RAM-B-3091U**

or

 **RAM-B-345U**  
RAM Motorcycle Brake/Clutch Reservoir Cover Base with 1" Ball Centered

**RAM-B-345U**

First, go the Ram Mounts website.

Using the "Motorcycle Mount Wizard", put in the following information to find the correct mount (some "cheating here", but it will get you there quickly).

## Step 1 - Select Device

Select Make → Enter "2-Way Radio"

Select Model → Enter "Handheld 2-Way Radio"

## Step 2 - Select Device

Select Finish → Enter "Black"

Arm Length → Medium (overall length 4.31")

## Step 3 - Select Base

Select → Select by Motorcycle Make

Cycle Year → select from drop down list

Cycle Make → select from drop down list

Cycle Model → select from drop down list

## Step 4 - Check Part number listed

The part listed will be the lower mount or reservoir needed to attach the MC-100 display unit to your cycle. Any other part than the ones pictured here (which are already supplied with the MotoChello system) means that you will need to obtain ***only the lower mount listed***.

The balance of the mounting system is included in the package that contains your MC-100.
